

# Economic Benefits of Amending Solar Use Easement for SJV Growers, Families, and Local Governments

Clean energy has the potential to infuse almost **\$90B** into San Joaquin Valley over two decades, while reducing household electricity bills with lowest-cost wholesale clean energy

The 8-county San Joaquin Valley region has the potential to benefit from an almost \$90B clean energy transition. Without state policy intervention, the value to local SJV economies drops by nearly half.

This policy change is an economic stimulus for the San Joaquin Valley, providing a lifeline for growers, creating 22,000 sustained and more than 4,000 permanent jobs over 20 years, generating over \$7 Billion in tax revenue, and awarding families with more than \$34 Billion in labor income between 2024 and 2045 with benefits extending well beyond this period.

## SJV CLEAN ENERGY + STATE POLICY INTERVENTION

## SJV CLEAN ENERGY: BUSINESS AS USUAL

INVESTING IN THE SAN JOAQUIN VALLEY TO EASE THE BURDEN OF GROUNDWATER SUSTAINABILITY ON LOCAL GROWERS AND THE REGIONAL ECONOMY
